CITY NEST

EMMA SENESAEI - VIS4

2022-2023

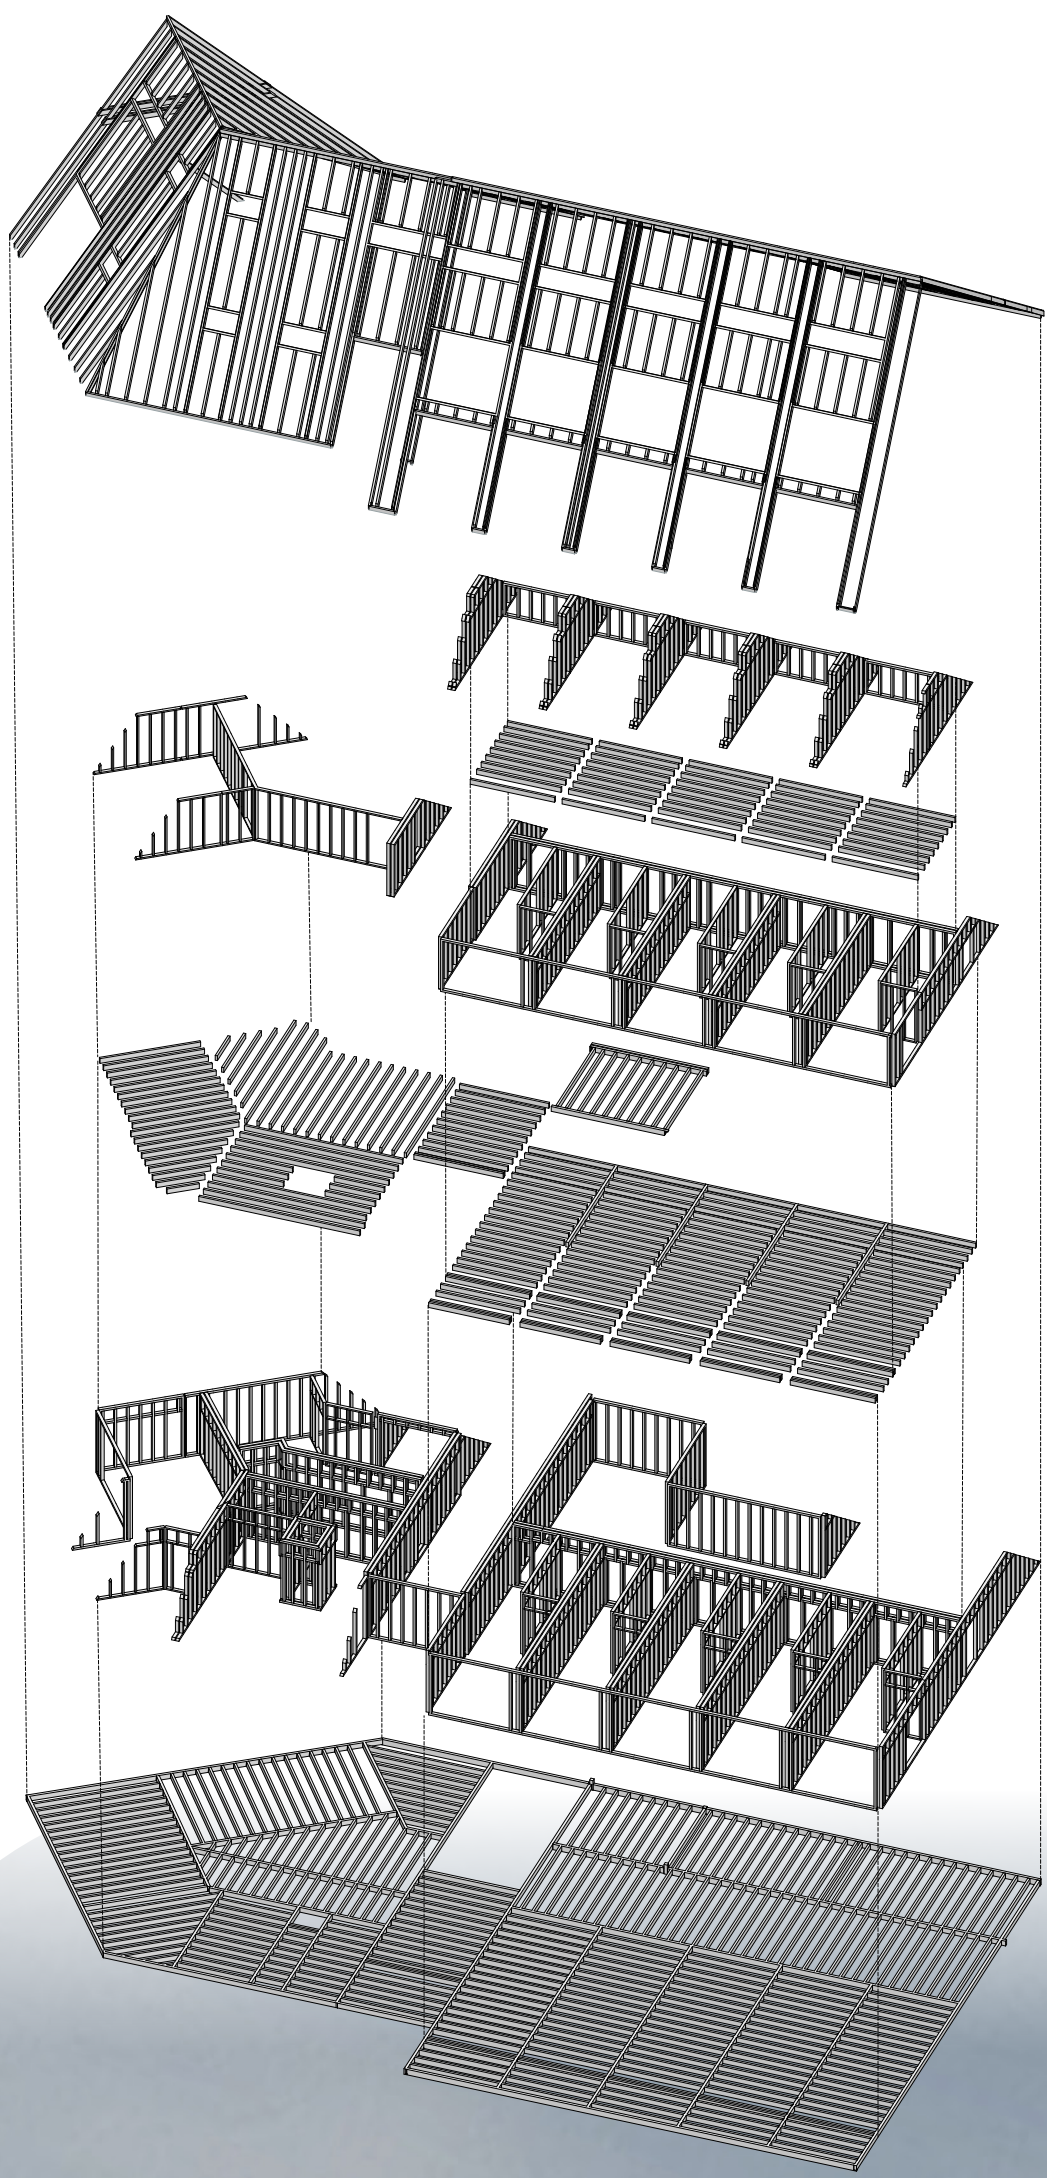

My building is structured with a gabled roof, dividing it into two sections: one for individual rooms and the other for communal areas. This innovative design not only fosters social interactions but also ensures easy accessibility to shared amenities.

The communal space within the student residence would feature a diverse array of facilities, including a spacious lounge, a well-equipped kitchen, inviting dining areas, and engaging recreation zones.

On the other hand, the individual section of the building would comprise self-contained single-person accommodations meticulously designed to offer utmost privacy and comfort. Each room would be thoughtfully furnished with essential amenities, such as a cozy bed, a functional desk, ample storage space, and a private en-suite bathroom.

By implementing this unique concept, we strike a harmonious balance between vibrant social connections and personal seclusion, providing an ideal living environment for students to thrive.
